ANNUAL ADMINISTRATION

AND

PROGRESS REPORT

ON THE

LUNATIC ASYLUMS IN THE BOMBAY PRESIDENCY

FOR THE YEAR 1898.

Bombay:
PRINTED AT THE GOVERNMENT CENTRAL PRESS.

1899.

Digitized with financial assistance from the
Government of Maharashtra
on 22 July, 2017

No. $\frac{S.\ B.}{136}$ OF 1899.

From

THE SURGEON-GENERAL WITH THE
GOVERNMENT OF BOMBAY,
Bombay;

To

THE CHIEF SECRETARY TO GOVERNMENT,
General Department,
Bombay.

Bombay, 12th June 1899.

SIR,

I have the honour to forward, for the information of Government, the Annual Administration and Progress Report on the Lunatic Asylums of the Bombay Presidency for the year 1898.

2. The usual repairs to the asylum buildings have been carried out by the Public Works Department during the year under review.

3. *At Colába*, the total cost of repairs to the buildings, and of providing quarters for servants in the Superintendent's compound, amounted to Rs. 7,287-8-1 against Rs. 5,760-2-3 in 1897.

4. *At Ratnágiri*, the asylum buildings are in good order. Some alterations in the urinals of the barracks are necessary, but as the question of abolishing this asylum is under consideration, the same have been held in abeyance.

5. There have been no additions or alterations in the Poona Asylum buildings during the previous two years.

6. *At Dhárwár*, a wall was constructed in place of the railings which existed on the sides of the male and female yards facing the main and jail roads. Additional accommodation to the Hospital Assistant's quarters was also provided. In addition to these, superficial drains in front of the solitary cells and the day-barrack were also made. A proposal has been submitted for providing special accommodation for criminal insanes and six quarters for warders, but sanction has not been received. Small trap gratings have also been provided in the doors of each of the solitary cells.

7. No additions or alterations were made in the buildings of the Lunatic Asylum at Ahmedabad. The improvements to the ventilation of the asylum kitchen, and the scheme for providing separate accommodation for criminal lunatics, have been put off for want of funds. Iron-barred doors to six cells for dangerous lunatics have been sanctioned, and are now under construction.

8. *At Hyderabad*, there have been no changes in the asylum buildings during the year under review. The Superintendent again brings to notice the necessity for raising the outer walls of the Asylum and the inner enclosures, as in their present state they are too low to prevent the escape of lunatics.

9. The water-supply was good and ample for all purposes, except at Ratnágiri, where much of the garden ground had to be left untilled. The auxiliary tank at Colába was almost always full, and met the demands of the asylum.

10. The undermentioned works were executed at the lunatic asylums out of the discretionary grant at my disposal during the year 1898:—

	Rs.
Extending the gutter from the servants' quarters to the Jail compound at the Ratnágiri Lunatic Asylum	150
Providing cage brackets to hold lamps in the Poona Lunatic Asylum...	30
Providing iron-barred doors to six cells for dangerous lunatics at the Ahmedabad Lunatic Asylum	129
Total ...	309

11. On the statistical tables appended at the end of the report, I beg to make the following remarks:—

Statement No. I shows that the total population of the Asylums was 1,043, or 14 more than in the previous year. Of this, 842 were males and 201 females, as compared with 836 males and 193 females in 1897. On 1st January 1898 there remained 610 males and 151 females; 219 males and 47 females were admitted, and 13 males and 3 females re-admitted; 66 males and 14 females were discharged cured, 87 males and 8 females transferred to the care of friends (76 males and 4 females improved, and 11 males and 4 females not improved), and 2 males discharged otherwise (one transferred to the Dhárwár Plague Hospital and the other to the Lahore Lunatic Asylum), 43 males and 12 females died, against 61 males and 20 females in 1897, leaving at the end of the year under review 644 males and 167 females—total 811, as compared with 761 (males 610 and females 151) in the previous year. The daily average strength was 627·3 males and 159·6 females—total 786·9 against 764·7 (males 616·4 and females 148·3) in 1897.

The percentage of deaths and cures to the daily average strength were:—

Cured	...	Males	10·5	Total ...	10·2
		Females	8·8		
Died	...	Males	6·9	Total ...	7·0
		Females	7·5		

The percentages to admissions were:—

Cured	...	Males	28·4	Total ...	28·4
		Females	28·0		
Died	...	Males	18·5	Total ...	19·5
		Females	24·0		

Statement No. II is a return of criminal lunatics. On 1st January 1898, there remained 112 males and 9 females, 20 males were admitted and 1 male was re-admitted, giving a total of 142 (males 133 and females 9) in all confined, or the same as in the year 1897. Of these, 14 males were discharged, transferred, &c., 9 males died, and 110 males and 9 females remained at the close of the year. The daily average strength of these insanes was 117·0 (males 108·0 and females 9·0), as compared with 113·7 (males 104·7 and females 9·0) in 1897.

The subdivisions of this class of insanes are given in the following table as ordered by the Government of India:—

Criminal Insanes.	Colába.	Ratnágiri.	Poona.	Dhárwár.	Ahmedabad.	Hyderabad (Sir Cowasji Jehangir).	Total.
Those tried and acquitted on the ground of insanity	10	7	...	1	15	6	39
Those insane on admission and found to be incapable of making a defence ...	32	16	3	6	5	16	78
Those who became insane during imprisonment	10	1	2	7	4	1	25
Total ...	52	24	5	14	24	23	142

Of the third subdivision there can be little doubt that a considerable proportion were insane before conviction, the malady having been overlooked by the Judicial Courts,—an occurrence which I have several times observed.

Statement No. III treats of the religion, sex and residence of the insanes admitted during the year under report. Of the admissions and re-admissions, 77 were Christians (53 Europeans, 9 Eurasians and 15 Native Christians), 123 Hindus, 64 Mahomedans, and 18 of other castes. Of the 37 European Military insanes, 12 came from Bombay, 12 from the Panjáb, 7 from Bengal and 6 from Madras. The 16 Civilian admissions were from Bombay, inclusive of 2 Sailors from the Harbour.

Statement No. IV shows the previous occupations of the insanes admitted during the year 1898. Soldiers (mostly Europeans) form the majority, *viz.* 37, beggars and mendicants numbered 25, merchants and traders 22, clerks 17, labourers 16, domestics servants 15, and cultivators 14. In 36 cases the occupation was not ascertained, and 33 had no occupation.

Statement No. V gives the ages of the insanes admitted according to sex. Under 20 there were 15 insanes (12 males and 3 females), between 20 and 40 there were 215 (183 males and 32 females), between 40 and 60 years of age there were 49 (36 males and 13 females), and above 60 years 3 (1 male and 2 females).

Statement No. VI treats of the various types of insanity with the result of the treatment of each form, and is summarised in the following table:—

	Remained.	Admitted.	Total.	Recovered.	Improved.	Died.
Idiocy	37	9	46	...	1	...
Mania, acute or chronic	387	133	520	50	32	26
Melancholia	128	85	213	16	23	12
Dementia, including acquired	205	42	247	11	17	17
Mental stupor	2	1	3	...	2	...
General paralysis of the insane	1	...	1	...	...	...
Delusional insanity	1	12	13	...	5	...
Declared to have recovered, or not yet diagnosed	...	...	...	...	...	...
Total ...	761	282	1,043	80	80	55

Statement No. VII gives the alleged causes of insanity among the lunatics. Of the 1,043 cases, the cause is given in 493 and is unknown in 550. Physical causes are credited with 378 cases, and moral with 115. Of the former, the use of intoxicating drugs and abuse of spirits contributed 141 cases, previous attacks 59, epilepsy 34, fever 31, hereditary causes 30, congenital diseases 21, masturbation 18, injury to head and destitution 8 each, sunstroke, childbirth and sexual excess 6 each, syphilis 3, uterine disorder and hypochondriacal causes 2 each, and old age, climate and overwork 1 each.

Among the criminal insanes charged with crimes of violence, the following are the alleged causes, as far as they can be ascertained:—

Ganja smoking	12	Hereditary	3
Spirit drinking	2	Grief	2
Fever	1	Religion	3
Puerperal fever	1	Anger	1
Fever and persistent headache.	1	Anxiety	1
Epilepsy	9	Previous attack	1
Injury to head	1	Masturbation	1

In 37 such cases the cause is not known.

Statement No. VIII is a return of the sick in the asylum hospitals (for diseases other than insanity), with the results. On 1st January 1898 there remained 39 patients under treatment, and 473 were admitted during the year, making a total of 512 against 561 in 1897. Of these, 419 were cured, 9 discharged otherwise (8 made over to friends and 1 removed to the Plague hospital), and 55 died, leaving 29 on the sick roll on 31st December 1898. The daily average number of sick was 41·2 (males 30·3 and females 10·9) as compared with 49·0 (males 38·9 and females 10·1) in the previous year. The chief causes of admission were ague, dysentery, debility, diarrhœa, epilepsy, phthisis chronic, rheumatism, ulcers, anæmia and Bright's disease. Of the 55 deaths, 9 were due to dysentery, 8 to phthisis chronic, 7 to diarrhœa, 5 to anæmia, 4 each to debility and Bright's disease, 3 each to paralysis and epilepsy, 2 to remittent fever, and one each to idiopathic anæmia, old age, cerebral hæmorrhage, empyema, cirrhosis of liver, albuminuria, heat apoplexy, asphyxia from hanging, concussion of the brain and rupture of the spleen.

The following table shows the ratio of deaths per mille of the average daily strength, and the total population of each of the asylums, as compared with that of the previous year :—

		Average Daily Strength.	Total Population.	Number of Deaths.	Ratio of Deaths per mille to Average Daily Strength.	Ratio of Deaths per mille to Total Population.
Colába	1898 ...	311·3	459	27	147·4	58·8
	1897 ...	285·1	441	48	168·4	108·8
Ratnágiri	1898 ...	94·8	109	4	42·2	36·7
	1897 ...	98·7	110	5	50·7	45·5
Poona	1898 ...	105·7	142	10	94·6	70·4
	1897 ...	99·8	141	12	120·2	85·1
Dhárwár	1898 ...	60·0	73	5	83·3	68·5
	1897 ...	61·8	70	6	97·1	85·7
Ahmedabad	1898 ...	107·1	121	2	18·7	16·5
	1897 ...	109·3	120	2	18·3	16·7
Hyderabad (Sir Cowasji Jehangir).	1898 ...	108·0	139	7	64·8	50·4
	1897 ...	110·0	147	8	72·7	54·4
Total ...	1898 ...	786·9	1,043	55	69·9	52·7
	1897 ...	769·7	1,029	81	105·9	78·7

It will be seen from the above table that the death-rate in 1898 was much less in all the asylums, excepting at Ahmedabad, where it continued low and the ratios per mille were practically unchanged.

At Colába there were 27 deaths (2 Europeans and 25 Natives), or 21 less than in the previous year, making a death-rate of 58·8 per mille of the total population as compared with 108·8 in 1897. Among the Europeans the number of deaths was 2, or a half of that of the previous year, and the mortality was at the rate of 26·3 per mille of the total population against 58·8 in 1897. The two European patients who died during the year were cases of paralysis and Bright's disease. Both of these inmates had been suffering for a considerable time from secondary dementia and succumbed subsequently to the physical ailments mentioned after lengthened periods of confinement in the asylum. The mortality among the natives gave a ratio of 65·3 per mille of the total population as compared with 118·0 in 1897, being chiefly under the heads of dysentery, chronic phthisis, Bright's disease, paralysis and epilepsy. Four of these cases were brought in by the Police and were found on admission to be suffering from various diseases, or from the effects of privation. There was one death by asphyxia from hanging (suicidal). The patient was a criminal lunatic confined for voluntarily causing grievous hurt. He was subject to epileptic fits followed by much excitement. He contrived, during his confinement in the cell, to make a rope out of threads taken from a blanket; this he tied to the lattice ironwork of the window of his cell and so hanged himself. An inquest was held on the body about 5 hours after death, and the jury returned an open verdict. The remaining fatal cases were old residents of the asylum who had been suffering from anæmia and debility for some time. All such cases succumbed to one or other of the prevailing diseases.

At Ratnágiri there were 4 deaths against 5 in 1897, giving a death-rate of 36·7 per mille of the total population as compared with 45·5 in the previous year. The causes of death were remittent fever, old age, diarrhœa and concussion of the brain. The case of remittent fever was a male, aged 43, whose health, on admission into the asylum on 7th April 1891, was noted as "fair."

He was anæmic. In 1895 he suffered from dysentery and in 1897 from fever. He was admitted into hospital on 17th October 1898 for remittent fever, and died exhausted on 22nd of the same month. The patient who died of old age on 16th December 1898 was transferred from the Colába to this asylum in 1886, having been in confinement since 1865. On 12th October 1898, he was placed on the sick list for debility resulting from old age. Before admission into hospital he had gradually lost his eye-sight from senile cataract. The patient who died from diarrhœa on the 21st February was in the asylum for nearly 5 years. His weight on admission was 106 lbs., which became reduced to 90 lbs. The woman reported as having died of concussion of the brain is reported to have been weak, excitable and dirty on her admission into the asylum. She often tried to strike her head against a wall. On 14th February 1898, while running towards a privy, she is said to have fallen on rough ground and to have become insensible. She sustained a contused wound of the head, and died within an hour of the accident. A *post-mortem* examination was held, but no injury to the internal parts was found, except that there was extravasation of blood beneath the scalp on the back of her head. The inquest attached no blame to any one, and death was attributed to shock.

The Poona Asylum shows a decrease of 2 deaths. The ratio of deaths per mille of the total population was 70·4 against 85·1 in 1897. The mortality was due to anæmia 4, and epilepsy, debility, diarrhœa, phthisis pulmonalis, empyema and albuminuria 1 each. The female who died of anæmia was, on admission into the asylum for acute dementia on *2nd December 1896, in a "fair" state of health, though anæmic and rather weak and emaciated. There was a slight improvement in her* general condition for a short time, but this soon ceased and she had recurrent attacks of fever which necessitated her permanent transfer to the sick list on 15th October 1897. She steadily got worse and died on 3rd January 1898. On examination the body was found emaciated. The brain weighed 2 lbs. 5 ozs.; its substance was soft and a large quantity of serous fluid was present in the cavity of the arachnoid. The cerebral veins were congested. No abnormal growth of any kind could be detected. Heart was normal in appearance. Liver weighed 2 lbs. and 2 ozs., spleen 5 ozs. The second case of anæmia was that of a male who was admitted into the asylum for acute mania on 25th January 1898, and being very weak and emaciated was at once put on the sick list. He continued in this state until death, which took place on 16th February 1898 from exhaustion. At the request of his relation, no *post-mortem* examination was made. The third fatal case of anæmia was that of an old man who had to be placed on the sick list when admitted to the asylum for dementia on 14th January 1898, being so weak and emaciated as to be unable to walk or assist himself in any way. His general condition did not improve, and he died from exhaustion on 26th February 1898. There was some opaque fluid beneath the membranes, on the surface, and also in the ventricles of the brain, the tissue of which was somewhat softened. No abnormal growth in the brain could be seen. The heart and spleen were normal, lungs congested. The liver weighed 2 lbs. The fourth fatal case of anæmia was that of a woman, admitted into the asylum for acute mania on 21st December 1895, who was liable to attacks of great excitement and was difficult to manage. She was taken into the hospital on 1st March 1898 for fever and diarrhœa, which steadily increased the anæmia and debility. She died on 31st July 1898. The body was thin and anæmic. The membranes and substance of the brain were pale; some serous fluid was seen in the cavity of the arachnoid and ventricles. The choroid plexuses were atrophied and anæmic. The heart was pale, so also were the lungs. The liver fatty; the spleen of normal size. The intestines presented a reddened appearance in their lower part. The patient who died of debility was admitted into the asylum on 5th August 1888 in a starving condition, anæmic and emaciated. He continued in much the same condition, but dyspepsia supervened, and he gradually sank until he died on 13th July 1898. The body was emaciated; the brain weighed 45 ounces, and was soft and anæmic; the cavity of the arachnoid and the ventricles contained about 4 ozs. of thin fluid. No abnormal growth was seen. The heart, lungs and abdominal organs were anæmic. The fatal case of diarrhœa was that of a female who, when admitted for chronic mania, was in a fair state of health. She had recurrent attacks of diarrhœa for which she was placed on special diet and

admitted into hospital on 25th February 1898. Death occurred on 14th July. The body was thin and emaciated. The brain which weighed 43 ounces was softened, and was anæmic on the left and somewhat congested on the right side; its ventricles contained no fluid. The heart was pale; but its valves were normal. The lungs, liver, spleen and intestines were anæmic. The fatal case of empyema was admitted into the asylum on 14th August 1896 for dementia (epileptic). Shortly after admission he had severe epileptic fits which frequently recurred and were complicated with pleurisy and bronchitis. He died from empyema on 14th July 1898. The body was flabby and pale, and the face somewhat œdematous. The brain which weighed 46 ounces was anæmic; a little serous fluid was seen in the ventricles, but no morbid growth in its substance. The lungs were congested, and the right pleural cavity contained about a pint of thick pus. The liver and spleen were anæmic. The patient who died of phthisis pulmonalis was, on admission into the asylum on 17th January 1895 for acute dementia, in a very weak state owing to frequent attacks of bronchitis. When transferred to the Asylum hospital on 25th February she was much emaciated and very anæmic, and had well-marked bronchitis. Though nourishing diet was freely given, she became gradually worse and died on 14th August 1898. The body was thin and pale. The right pleural cavity contained a large quantity of thick and stinking pus, and the lung was quite disorganized by purulent degeneration. The other organs, including the brain, were anæmic. There was some serous fluid in the cavity of the arachnoid and in the ventricles of the brain. No abnormal growth could be seen. The fatal case of epilepsy entered the asylum for acute mania on 26th November 1896. Shortly after admission he was seized with a sharp epileptic fit, and continued liable to recurrent attacks until death on 26th September 1898. The body was thin and anæmic. The brain, which weighed 44 ozs., was congested on its surface and pale within: and there were about 3 ounces of thin serous fluid in the cavity of the arachnoid and ventricles. No abnormal cerebral growth was seen. The right lung was consolidated in parts and adherent to the sides of the chest. The left lung pale. There were about 2 ounces of thin serous fluid in the cavity of the pericardium. The abdominal organs were anæmic. The insane who died of albuminuria was, at the time of admission into the asylum on 12th September 1898 for chronic dementia, suffering from albuminuria associated with epileptic fits; and he died in a very weak and exhausted state on the 26th idem. The brain was found soft and pale, but contained no abnormal growth or fluid. Lungs congested. Heart pale. Kidneys contracted and atrophied.

The Dhárwár Asylum returned 5 deaths against 6 in 1897, giving a ratio of 68·5 per mille of the total population as compared with 85·7 in the previous year. Two deaths were due to diarrhœa and 1 each to remittent fever, debility and cerebral hæmorrhage. The death from general debility was in a male admitted into the asylum on 11th November 1897 in a feeble state of health. He laboured under fits of excitement and frequently refused his food. He gradually became weaker and was unable to walk or assist himself in any way. On 11th May 1898, while in the act of hurriedly drinking some water, violent hiccough set in, and he immediately sank and died, though artificial respiration and galvanism were resorted to. The patient who died of apoplexy was, on admission into the asylum on 20th February 1898, returned as in a bad state of health and partly paralysed. He gradually became worse and was unable to walk or assist himself in any way. On the morning of 23rd June he was suddenly seized with a fit and remained unconscious for 24 hours when he expired. The brain was found to weigh 52 ounces; its membranes were deeply congested and the subarachnoid fluid was very greatly increased in quantity. The case of remittent fever was in a female who was transferred from Bombay to this asylum on 4th October, when she exhibited signs of great restlessnes, was very talkative and noisy and dirty in her habits. She also refused her food and scarcely ever slept. On the morning of the 13th idem she had fever with rigors, her temperature being 102°, bowels constipated, tongue dry and coated. In the evening her temperature rose to 105°, and up to her death it varied from 100° to 104°. She gradually became more weak and emaciated, and it was with the greatest difficulty she could be persuaded to take any nourishment or medicine. She died on the 18th October 1898 from collapse

and exhaustion, the temperature suddenly falling below normal on the day of her death. There were neither glandular inflammation or enlargement nor pneumonic symptoms to indicate suspicion of plague. Of the two fatal cases of diarrhœa, one was a man of about 70 years of age, who arrived at the asylum on 2nd August 1890 with mania. During the last three years he was subject to chronic rheumatism, which greatly impaired his constitution. He was admitted into the asylum hospital for diarrhœa on 18th November, and from that date he refused to take food or medicine. His diarrhœa gradually became more severe, and for a week or so before his death he passed his motions involuntarily. General anasarea gradually supervened, and he eventually succumbed from exhaustion on 7th December 1898. The other case of diarrhœa ending fatally came into the asylum for dementia on 3rd April 1880 in bad health. He was subject to frequent epileptic fits which recurred at intervals of about ten days up to the time of his death; and was also liable to attacks of fever and bronchitis which reduced him to a feeble condition. On 23rd June 1898 he was placed on the sick list for diarrhœa, which lasted for about 15 days, leaving him quite prostrate and feeble. Bronchitis supervened, and from this and frequent epileptic fits he sank and died from exhaustion on 21st July 1898.

At Ahmedabad there were two deaths, or the same as in the previous year. The mortality was at the rate of 16·5 per mille of the total population as compared with 16·7 in 1897. The first case was an insane, aged 45 years, who was an inmate of the asylum for over 13 years, and was subject to chronic diarrhœa. The other was a man, aged 27 years, twelve years resident in the asylum, who died on 31st December 1898 during an epileptic attack to which he was subject.

The Sir Cawasji Jehangir Lunatic Asylum at Hyderabad shows a decrease of one death on those of the previous year, *viz.* 7 against 8. The ratio of deaths per mille of the total population was 50·4 as compared with 54·4 in 1897. The mortality was due to anæmia, dysentery, debility, diarrhœa, heat apoplexy, cirrhosis of liver, and rupture of the spleen. As regards the fatal case of rupture of the spleen, the cause was not known; there were no marks of external violence. The patient was a criminal lunatic transferred from the Hyderabad Central Prison on 7th August 1897. He was suffering from melancholia and in a weak and emaciated condition. On the 26th August 1898 he became very ill; and being admitted into the asylum hospital, his abdomen was found so tender that he could not bear pressure. The following day abdominal section was performed and the spleen was found ruptured in two places on the anterior superior aspect from which hæmorrhage had taken place. The splenic vessels were ligatured, and the spleen was removed. It was enlarged and hypertrophied, weighed 24 ozs., and was 7 inches long and 3 inches wide. The splenic substance in the immediate neighbourhood of the rupture was friable. The patient died on the morning of 29th idem, *i.e.* on the 3rd day after the operation. *Post-mortem* examination showed that the liver was contracted and cirrhotic, and the under-surface of the left lobe congested. All the other organs were normal. The case which died of heat apoplexy was that of a female admitted into the asylum on 18th October 1896 for mania associated with insomnia, and liable to frequent and violent outbursts of passion. On the afternoon of 14th June 1898 she was attacked with sunstroke and never rallied, dying the same night at 10 P.M. The brain was congested and weighed 46 ozs.; lungs congested, liver enlarged, weight 3 lbs. 15 ozs.; spleen enlarged and congested; the heart weighed 7 ozs., and there was fluid in the pericardium. All the other fatal cases were in an emaciated condition on their admission into the asylum.

The suggestions made by the Director General, Indian Medical Service, in his note on the Reports of Lunatic Asylums under Local Governments and Administrations for the year 1894, regarding the issue of prophylactics in the unhealthy seasons when malarial fevers of intermittent type were mostly rife, were carried out in all the asylums. Quinine and cinchona alkaloids were freely used during these seasons, and quinine and ferruginous preparations were usually given to those who were debilitated and anæmic, with advantage.

At Colába, Poona and Hyderabad, no cases of injuries of a "major" kind were treated. The Superintendents of the Ratnágiri, Dhárwar and Ahmedabad

Lunatic Asylums report that the injuries were purely accidental, and were not due to any laxity in supervision or want of vigilance on the part of any of the establishment.

Statement No. IX is the cash account of the asylums during the year 1898. The total income was Rs. 1,52,293-0-1. Of this, Rs. 1,22,012-9-0 were received from the Treasury, Rs. 14,436-4-2 from paying patients, Rs. 2,726-3-10 from the Manufacturing Department, being the value at market rates, less cost of raw materials, of articles supplied to the asylums and sold to the public and labour of lunatics employed on grinding grain, and Rs. 12,897-6-7 were "book receipts" on account of works done by the Public Works Department and supply of Europe medicines, stores, stationery and printed forms; the corresponding figures for the previous year being Rs. 1,29,691-9-6, Rs. 14,510-3-2, Rs. 2,710-11-11 and Rs. 10,640-4-7. Rs. 220-8-6 were got from miscellaneous sources as compared with Rs. 63-10-3 in 1897.

The total expenditure was Rs. 1,52,293-0-1, or Rs. 5,323-7-4 less than in the previous year. The establishment cost Rs. 42,958-10-8, against Rs. 52,813-5-11 in 1897. Of this decrease the greater portion (Rs. 8,673-0-5) was due to the temporary withdrawal of the full-time Superintendent. The expenditure on diets was Rs. 63,804-6-11, the increase of Rs. 2,719-2-3 over the preceding year being due to a certain extent to higher contract rates prevailing during the year under report and to a comparatively increased number of patients. There is an increase of Rs. 516-10-8 in the cost of clothing and bedding, due to the purchase of new articles at higher contract rates; whereas medicines and contingencies show a decrease of Rs. 388-2-4 and Rs. 816-12-7 compared with the preceding year.

If the amounts of Rs. 14,436-4-2 received from paying patients, Rs. 1,214-10-10 on account of the sale of manufactured goods to the public and the labour of lunatics, Rs. 218-4-6 realized by the sale of unserviceable articles, Rs. 2-4-0 on account of batta got by a warder from the Court, and Rs. 1,511-9-0 made over to asylums for asylum purposes,—total Rs. 17,383-0-6,—be deducted from the amounts received from the treasury and adjusted to Government as "book receipts," the net cost to Government was Rs. 1,17,526-15-1 and the net cost per head of daily average strength Rs. 149-5-8, as compared with Rs. 1,23,047-4-9 and Rs. 160-14-7 respectively in 1897.

The following is the abstract of cash account required by the Government of India as per their memorandum No. 9—Medical—499, dated 25th July 1890 Home Department (Medical), embodied in the Bombay Government Resolution No. 3149 of 9th August 1890, General Department :—

With reference to paragraph 7 of Government Resolution, General Department, No. 2714, dated 2nd July 1894, I beg to solicit the attention of Government to my Annual Administration Report on the Asylums of the Bombay Presidency for the year 1895, *re* the fluctuations in expenditure under different heads in the various asylums, and to state that I have nothing more to add to the remarks therein made which apply to the year under review.

Statement No. X shows the sanctioned establishment as it stood on 31st December 1898. The monthly cost was Rs. 4,094-8-0, as compared with Rs. 3,993-8-0 in 1897. The increase of Rs. 110-0-0 is due to the increased rate of pay to the steward at Colába and to the entertainment of a conservancy cart-driver at Poona, and of a First Class Hospital Assistant, in lieu of a Third Class, and of two additional male warders at the Dhárwár Lunatic Asylum.

Statement No. XI shows the receipts and expenditure of the Manufacturing Department. The total credits amounted to Rs. 3,571-3-4, and debits to Rs. 2,456-3-7, showing a profit of Rs. 1,114-15-9 against Rs. 1,418-11-0 in 1897. The average number of insanes employed during the year was 291·3 males and 68·1 females—total 359·4, as compared with 366·9 (males 300·7 and females 66·2) in the previous year. In calculating the percentage of the lunatics employed, those employed as supplementary servants of the asylums, *i.e.* for works other than on manufactures, have also been included in this statement, but the estimated value of their labour has not been taken into account.

Referring to paragraph 24 of the note by the Director General, Indian Medical Service, Simla, on the Reports of the Lunatic Asylums under Local Governments and Administrations for the year 1895, I beg to state that at all the asylums of this Presidency the want of more agricultural or garden land is much felt. Much is however done by the Superintendents towards encouraging lunatics, who are harmless and willing to be useful, to work in the factories attached to the asylums and also in extra-mural occupations. The treatment of the insanes is carried on, as far as possible, according to the modern views of specialists in mental diseases, by good diet and light work; and different kinds of recreation and amusements are provided for them, such as musical instruments, games, books, papers, periodicals and fireworks. Native musicians are periodically engaged to amuse them, and on principal holidays extra diet and sweetmeats are issued. All these amusements are much appreciated by the patients, and conduce to their health and comfort; and they constantly enquire when a holiday will take place and entertainments be repeated.

This system has been in force for many years, and the sum thus expended during the year under report was Rs. 1,460.

At Colába the European and Eurasian and Native paying patients have no suitable occupation in which they can be employed, whereas others, who are

willing to work, are employed on vegetable cultivation and in the factories for coir matting, dungri cloth and canework. The other occupations in which their services are utilized are wheat-grinding, tailoring, carpentry, sweeping, gardening, washing, cooking, masonry, &c. In the other asylums of the Bombay Presidency the males are chiefly employed on vegetable cultivation and in domestic occupations, and the females in grinding grain. It will thus be seen that much is done to give some kind of healthy employment to the inmates.

As regards the establishment of dairy farms in the asylums of this Presidency, as recommended by the Director-General in the concluding portion of the paragraph of his note above referred to, I beg to solicit the attention of Government to the views expressed at page 9 of my Annual Administration Report on Lunatic Asylums for the year 1896.

Statement No. XII gives the condition of the insanes as to caste, sex and marriage, and is summarized in the following tables :—

Table I.

Statement No. XIII gives particulars regarding criminal lunatics. Of the average strength of 117·0 (males 108·0 and females 9·0), 49·9 males and 7·3 females, or a total of 57·2, were employed against 51·0 (males 43·9 and females 7·1) in 1897. Thirty-one males and 1 female were charged with theft, 43 males and

5 females for culpable homicide amounting to murder, 8 males and 1 female for culpable homicide not amounting to murder, 3 males with attempt to commit suicide, 12 males and 1 female with causing grievous hurt, 9 males with housebreaking, 7 males with mischief and assault, and 20 males and 1 female with miscellaneous offences, such as dacoity, forgery, mischief by fire, &c. &c.

12. The official visitors were regular in their attendance at all the asylums, except at Colába, in the month of December, when my Personal Assistant was unavoidably absent. He was prevented at the last moment by urgent public business from leaving the office, and there was no time to arrange for a substitute as required by Government Resolution No. 104, dated 12th January 1874, General Department.

13. The Principal Medical Officer, Sind District, Karáchi, inspected the Sir Cowasji Jehangir Lunatic Asylum at Hyderabad in September 1898 and found everything in good order.

14. On August 19th, 1898, I inspected the Lunatic Asylum at Poona, the state of which indicated good management. But the buildings have not a few defects, and should be replaced by more modern and spacious premises with better recreation grounds. The accommodation for the inferior establishment is very inadequate. On August 26th I visited the asylum at Dhárwár which was in excellent order; but the arrangements do not permit of the separation of criminal insanes from the other inmates. On September 8th I inspected the Colába Lunatic Asylum, which I found clean and in good order. The buildings are faulty in structure and arrangement, and I remarked that, as in our other asylums, it is impossible to separate, to the extent desirable, the different forms or phases of mental disease. Old and young patients, maniacs and imbeciles, dirty and cleanly, chronic and recent cases are unavoidably associated together to the obvious discomfort and disadvantage of many.

I found a European imbecile child among women with mania and melancholia. The children who enter our asylums are few; but it seems desirable that they should be specially provided for at a Central Station with a good climate.

The attendants at this asylum are, in my opinion, insufficient for proper care and supervision.

On 24th January 1899, I inspected the Lunatic Asylum at Ahmedabad, the management of which is excellent; but I noted the following defects in the buildings. The mud floors should be replaced by cement or tiles; the kitchen greatly needs enlargement and ventilation, and the latrine near to it should be placed further away. A mortuary should be built as soon as possible; and new quarters are required for the Hospital Assistant, whose present house would serve for some of the inferior staff, several of whom are unprovided with accommodation. Arrangements for the complete separation of criminals from other patients are also necessary.

On 11th March 1899, I inspected the Ratnágiri Lunatic Asylum with the state of which I was well satisfied. The situation is good and the area spacious, the buildings are substantial and well arranged, and, on the whole, very free from serious defects. The most notable exceptions are the urinals in the wards, and a block of four solitary cells, arranged on a cruciform plan, which is bad. The Medical Subordinate's quarters also are so unsuitable, that the present Hospital Assistant occupies his own house close by.

The separation of criminal lunatics from others by day is incomplete, owing mainly to insufficiency of establishment.

15. The management of the asylums by the Superintendents was satisfactory; and excepting one man who was removed for concealing plague cases, the Hospital Assistants' conduct was good. It appears to me that the clinical and pathological observations might be recorded with greater fullness and precision; and I trust that in future this will be done.

I have the honour to be,

Sir,

Your most obedient servant,

G. BAINBRIDGE, M.D.,

Surgeon-General with the Government of Bombay.

ANNUAL STATEMENT No. I.

Showing separately the Admissions, Discharges, &c., &c., of Lunatics in the Lunatic Asylums in the Bombay Presidency during the year 1898 and ten previous years.
